

Tasks — A Simple User Guide

How field visits work in EHRMS, explained in plain language — for staff, supervisors, and managers.

EHRMS · Field Tasks · June 2026

A **Task** is a visit a staff member makes to a customer's location — for example a delivery, a service call, an inspection, or a sales meeting. The app guides the staff member from the moment the job is assigned until it is finished, and keeps a clear record of where they went and what they did.

In one line: someone assigns a visit → the staff member travels there (the app tracks the route) → they prove they arrived and did the job → they mark it complete → a full report is saved automatically.

1. Who does what

Person	What they do
Manager / Scheduler	Creates the task, picks the customer, sets the due date, and assigns it to a staff member. Later reviews the report and approves it if approval is required.
Field staff	Gets the task on their phone, travels to the customer, proves arrival (photo / selfie / form / OTP), and marks it complete.
Customer	If OTP is used, receives a 4-digit code by email and shares it with the staff member to confirm the visit really happened.

2. The task journey, step by step

1 Task is assigned

The manager creates the task with a title, the customer, and a due date. It appears in the staff member's *My Tasks* list with a status badge.

2 Staff starts the ride

The staff member opens the task and taps *Start*. From now on the app quietly records their route on the way to the customer, so there is proof of the journey.

3 Travelling (live tracking)

While moving, the app sends the live location every few seconds. A manager can watch the staff member move on a map in real time. If the phone briefly loses internet, points are saved and sent automatically once it's back online — nothing is lost.

4 Pause or stop on the way (optional)

If the staff member needs to pause — lunch, another errand, end of day — they can put the task on **Hold** (they can resume it themselves later) or **Exit** it (a manager must reopen it before it can continue). The reason is recorded.

5 Arrived

At the customer's place the staff member taps *Arrived*. The app notes the time and exact location. If they are far from the customer's saved address, the report quietly flags it so a manager can see the difference.

6 Prove the visit

Depending on what the job requires, the staff member may:

- Take a **photo** as proof of work,
- Take a **check-in / check-out selfie**,
- Fill in a short **form**,
- Enter the **OTP** the customer received by email.

7 Complete

The staff member taps *Complete*. If the company requires sign-off, the task goes to *Waiting for Approval* for a manager; otherwise it is marked *Completed* straight away.

8 Review & report

A full **completion report** is generated automatically: the route on a map, a timeline of every step (start, stops, arrival, photo, OTP, completion), and any form answers. Managers and the staff member can open it any time.

3. Understanding the status badges

Each task shows a coloured badge so everyone knows where it stands at a glance.

Badge	Meaning
Assigned	Given to a staff member, not started yet.
Pending / Scheduled	Lined up to be done, possibly due soon.
In Progress	Staff member is on the way; live tracking is on.
Arrived	Reached the customer's location.
Hold	Paused — the staff member can resume it.
Exited	Stopped — a manager must reopen it to continue.
Waiting for Approval	Finished by staff, awaiting a manager's sign-off.
Completed	Done and recorded.
Reopened	A finished task sent back to be done again.
Rejected	Not approved.

4. About the OTP (one-time code)

- When OTP is switched on for the company, the customer gets a **4-digit code by email** when the staff member requests it.
- The customer reads the code to the staff member, who types it into the app.
- If the code matches, the visit is confirmed. This proves the staff member was really with the customer.

Good to know: the customer must have a valid email on file for OTP to work. If there's no email, the manager should add one, or the company can turn OTP off for that workflow.

5. Common questions

What if there's no internet on site?

The app keeps working. Location points and actions are saved on the phone and sent automatically when the connection returns, so the route and proof are not lost.

Can a staff member be in two places at once?

No. The route is recorded continuously, and the report shows the real path travelled and the time at each point — so the record is trustworthy.

What happens if they arrive at the wrong spot?

They can still continue, but the report flags that the arrival was far from the customer's saved address, so a manager can follow up.

Who can see the report?

The assigned staff member and their managers. It includes the map route, the timeline, photos/selfies, and any form answers.

Can a task be paused and finished the next day?

Yes. Use *Hold* to pause and resume later. The time spent travelling and on site is measured correctly across the pause.

6. Quick reference — staff checklist

1. Open the task from **My Tasks**.
2. Tap **Start** when you begin travelling.
3. Drive/walk to the customer — keep the app open.
4. Tap **Arrived** at the location.
5. Add the required proof: **photo**, **selfie**, **form**, and/or **OTP**.
6. Tap **Complete**.
7. Need a break? Use **Hold**, then resume later.

Tip: keep location and internet on during a task for the smoothest experience — the app will still recover if either drops, but live tracking works best when both are available.
